

VANCOUVER, BC--(Marketwired - January 12, 2017) - [Genesis Metals Corp.](#) (TSX VENTURE: GIS) ("Genesis" or the "Company") is pleased to announce that field work has commenced at its 100% owned Chevrier gold project (the "Project") near Chibougamau, Quebec.

Line cutting is underway on grids which cover four of six high priority targets areas that have been defined from the compilation of all data from the Project. The four target areas are located to the west and north respectively of the Main Zone of gold mineralization at Chevrier. Each target is from 1 to 3 km in length and encompasses an area considered prospective for mineralization. The assessment of prospectivity is based on available geological and structural mapping data that suggest environments considered favourable for hosting gold mineralization.

Upon completion of line cutting, approximately 50 line-kilometres of Induced Polarization ("IP") geophysical surveying will be undertaken. The resulting data will enable the Company to better define specific areas, within the broader targets, for further evaluation by detailed geological mapping, trenching and drilling in 2017.

Genesis' CEO Brian Groves commented, "Our decision to initiate our field programs is consistent with the strategy to evaluate the prospectivity of the entire Project. Most of the previous work on the Project has been focused within the immediate area of the Main Zone. While we plan to assess the potential for expansion of the Main Zone during the year, we also believe that the entire deformation corridor is prospective and requires detailed evaluation to generate new targets for drilling."

Mr. Andre Liboiron, P. Geo, Exploration Manager for the Company and the Qualified Person as defined within National Instrument 43-101 for the Chevrier Project, has reviewed the contents of this news release.

#### About Genesis Metals

The Company is focused on advancing the Chevrier Gold Project located 35 km southwest of Chibougamau, Quebec. The Project is located along the Fancamp Deformation Zone, 15 km northeast of the high-grade Monster Lake gold discovery.

Genesis also owns a 100% interest in the 203 km<sup>2</sup> October Gold project located in the southern Swayze greenstone belt in Benton Township, Ontario. This project is located 35 km northwest of IAMGold's Cote Lake deposit and 50km southeast of Goldcorp's Borden gold deposit.
