

Pan American Fertilizer Corp.: Provides Bi-Weekly Update on Late Year End 2013 Filing

15.07.2014 | [The Newswire](#)

Vancouver, July 15, 2014 - [Pan American Fertilizer Corp.](#) (TSX.V: PFE, Frankfurt: 6GF) (the "Company" or "Pan American") provides an update to its 2013 Year End Filings.

As a follow up to the Company's bi-weekly press releases starting April 30, 2014, the Company now anticipates that the year end 2013 audit will be completed by the end of July 2014. The Company is in the process of preparing all of the documentation required to request a lifting of the Cease Trade Order and for active trading to re-commence on the TSX-V exchange.

About Pan American Fertilizer Corp.

Pan American is a Canadian company dedicated to providing fertilizer to growing global markets specifically in South and Central America. The company is focused on the extraction of a specific type of fertilizer called calcium sulphate (also referred to as "Agricultural Gypsum") in Argentina. To ensure long term development and increase shareholder value, Pan American plans to significantly expand its current operational objectives while expanding its asset base by acquiring additional calcium sulphate and other fertilizer related assets and by expanding its markets to countries neighbouring Argentina.

The Calcium Sulphate project is a unique project, for the following reasons:

- 1) Its high grade calcium sulphate (CaSO_4) rock outcrops and is fully permitted and in operations via conventional extraction methods with secured mining rights for 20 years with right to extend for another 20 years, allowing for scalable operations;
- 2) It is strategically located in close proximity to the well-known "Nucleus Agricultural Zones" of South America where the majority of the continent's important and dynamic agribusiness activity is located;
- 3) It connects to Paraguay and Brazil's largest fertilizer distribution districts via existing and high quality infrastructure;
- 4) It has the potential to supply CaSO_4 to South America's agriculture market from its large calcium sulphate-rich deposit.

When used as a fertilizer and as a soil remediator, calcium sulphate is a soft sulphate mineral composed of calcium sulphate dihydrate ($\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$) which is extremely rich in sulphur and calcium. When dissolved in water, the mineral becomes calcium and sulphate ions, both of which are required nutrients for plants. Calcium Sulphate plays a vital role in establishing and maintaining good chemical balance in soil, water and plants, specifically with healthy root development. Ultimately, calcium sulphate increases overall crop quality and yields. For more information please look at our website www.PAFertilizer.com
