About Candente Gold

Candente Gold's flagship asset is El Oro, a district scale gold project encompassing the largest and most prolific high grade gold dominant silver epithermal vein system in Mexico. Modern understanding of epithermal vein systems indicates that several of the El Oro district's veins hold multi-million ounce discovery potential, particularly below and adjacent to the historic workings of the San Rafael Vein, which was mined to an average depth of only 200 metres.

In addition to the exploration potential at El Oro, Candente Gold has recently acquired the Mexican Mine Tailings Deposit and is building a 3D model to delineate remnant (un-mined) high grade mineralization and to define mineralizing controls for targeting potential additional high grade zones at depth or laterally. The Company's current corporate strategy is to process the tailings to generate short-term cash flow and then focus on remnant high grade mineralization left behind by historic mining and, in the future, return to exploration concentrating on 31 recently-delineated targets for new mineralized veins or zones.

Candente Gold also holds a portfolio of 100% owned, early to mid-stage; high and low sulphidation epithermal gold projects in Peru. Many of these projects have significant exploration completed and targets ready to be drill tested.
