

Next Graphite Inc. Closes \$800,000 USD Brokered Private Placement

16.11.2016 | [ACCESS Newswire](#)

[Next Graphite, Inc.](#) (OTC PINK: GPNE) ("Next Graphite," "GPNE" or the "Company"), a graphite development company in the African Republic of Namibia and license holder of the Aukam vein project, is pleased to announce that its joint venture partner, CKR Carbon Corporation, Toronto, Canada, has raised gross proceeds of CD \$1,087,979 pursuant to the brokered private placement led by First Republic Capital Corporation announced on October 17, 2016. All securities issued pursuant to the Offering are subject to a four-month hold period expiring on March 5, 2017.

Use of the net proceeds from the sale of these securities includes underground exploration, drilling and sampling at Next Graphite's Aukam Graphite Mine in Namibia required to apply for a mining permit and working capital.

"This latest raise will allow our JV partner to accelerate activities and complete Phase 3 of our farmout agreement for the Aukam mining site that culminates in a full mining license," said Cliff Bream CEO of Next Graphite. "That triggers the final Phase 4 and construction of our new processing facility, when revenue per ton will increase from approximately \$400 (unprocessed graphite) to \$3,000 (high quality processed graphite). We want to stay on our timetable to fulfill orders for the JV's 10 year supply agreement announced October 10, as well as other anticipated orders."

About Next Graphite, Inc.:

[Next Graphite, Inc.](#) is a development stage company targeting the growing global graphite production industry with the Company's Africa-based Aukam Graphite Project. The Aukam Graphite Mine was established in 1940 in the current Republic of Namibia and produced USD \$30 million of graphite at today's prices. The site is located on approximately 96,000 acres (34,082 hectares) in southern Namibia close to the port city of Luderitz and is estimated to contain a significant amount of high grade, vein type graphitic material.

The property hosts three underground adits that were mined periodically between 1940 and 1974. Five dumps from the historical mining occur on the property and 73 samples from the lower three dumps were assayed and averaged 42% Cg. Next Graphite's joint venture has completed a bulk-sampling program at Aukam, and the joint venture has a letter of intent to sell the graphitic material produced during the program. Findings to date have reinforced Next's intent to put the historical mine back into production. The Company is working to transition from its current exploratory license to a full mining license and build a new graphite processing facility. Next's joint venture in Namibia maintains high safety and environmental standards and has a comprehensive strategy of social engagement.
