

# Tudor Gold Extends Gold Zone at Treaty Creek to Over One Kilometer

12.10.2017 | [Newsfile](#)

Vancouver, October 12, 2017 - [Tudor Gold Corp.](#) (TSXV: TUD) (FSE: TUC) (the "Company" or "Tudor Gold") is pleased to report on the results of the first four holes of the Copper Belle zone and on the completion of the resource delineation program for the Copper Belle zone of the Treaty Creek property.

The Copper Belle resource delineation drill program was completed with 27 holes to depths below 700 meters and with step outs of 50 meters where it was possible. Over 13,722 meters of drilling was completed in the Copper Belle zone in 2017.

CB-17-04, the first step-out hole drilled this year on the Copper Belle zone, intersected 176.2 meters of continuous mineralization which returned 0.80 g/T Au from 152.1 to 328.5 meters depth. Hole CB-17-04 was collared 40 meters north of CB-16-03 where topography permitted. Complete results are pending for the remaining 23 holes.

Drill results for the first four Copper Belle holes at Treaty Creek are summarized in the table below:

Hole-ID	From (m)	To (m)	Interval (m)*	Au (g/T)	Ag (g/T)	Cu (%)
CB-17-04	152.10	328.50	176.20	0.801	1.0	0.008
	including					
	152.10	180.60	28.50	1.071	2.0	0.010
	192.70	202.80	10.10	2.897	1.3	0.007
	219.00	280.00	61.00	0.702	0.7	0.007
CB-17-05	98.20	102.30	4.10	0.926	2.3	0.012
CB-17-06	182.50	592.50	410.00	0.672	3.1	0.037
	including					
	182.50	199.50	17.00	0.678	1.4	0.010
	214.50	460.50	246.00	0.726	2.9	0.034
	475.50	592.50	117.00	0.708	4.5	0.054
CB-17-07	161.00	530.00	369.00	0.686	2.4	0.032
	including					
	203.00	246.50	43.50	1.810	11.88	0.142
	507.50	530.00	22.50	1.494	3.7	0.036

\* - True widths of the mineralization have not been determined.

Results from subsequent drill holes from the 2017 drill program at Copper Belle are still pending. Drill holes targeted the mineralized zone on Copper Belle and all holes to date have intersected long intervals of mineralization to depth. Drill holes were targeted oblique to the northwesterly plunge of the main mineralized zone. The drill program was designed for approximately 50 meter step-outs across the mineralized zone to create a block of delineated mineralization for a preliminary resource estimate. All drill holes were down hole surveyed at 25 m stations using a Reflex Multi-shot device.

The Copper Belle resource estimate will use data from 27 holes from 2017, three holes from 2016, 17 holes from 2009 and 10 holes from 2007, for a total of 22,970 meters drilled. These drill holes cover an area of approximately 250 meters wide by a kilometer long. Copper Belle zone mineralization is open in all directions and to depth.

The HC drill program consisted of 17 drill holes totaling 5,401 meters that tested the mineralized stratabound structure for a strike length of 400 meters and 400 meters down dip (still open at depth), and the vein system remains open to the north, south and at depth. The program was designed with a maximum of 50 meter

step-outs in the mineralized zone to prepare for a preliminary resource estimate in this area. Assay results are pending for the remaining holes.

A location map of the drill plan is attached or can be accessed on the company's website.

#### Copper Belle 2017 Drill Plan Map

The Company is very pleased to report that the magnetotelluric geophysical survey program ("MT Survey") that was implemented in 2016 has been effectively utilized as a guide for the 2017 drill program. The MT Survey suggests that the mineralization continues to the south, toward the Iron Cap deposit of [Seabridge Gold Inc.](#) The MT Survey also suggests that the mineralized zone continues in all directions. Tudor Gold's 2017 drill program is located five kilometers north of the Iron Cap deposit and the Company intends to step out to the south in its 2018 program to see if it can determine a relationship between the two areas.

Walter Storm, President and CEO, stated: "We are very pleased with these early drill results at Copper Belle because they demonstrate both grade, continuity and the immense size of this pervasively mineralized system. Two major faults control the mineralization which strikes southwest-northeast and dips to the northwest. Our exploration team is effectively following the mineralization using 50 meter step-outs, which will help ensure we have the data density for our planned mineral resource estimates."

Drill hole samples were assayed by Activation Laboratories Ltd. in Kamloops, BC. Analytical accuracy and precision are monitored by the submission of blanks, certified standards and duplicate samples inserted at regular intervals into the sample stream by Tudor Gold personnel. Activation Laboratories quality system complies with the requirements for the International Standards ISO 17025: 2005.

The Qualified Person for the Treaty Creek results in this new release is James McCrea, P.Geo. for the purposes of National Instrument 43-101. He has read and approved the scientific and technical information that forms the basis for the disclosure contained in this news release.

#### About Tudor Gold

Tudor Gold is a significant explorer in British Columbia's Golden Triangle, an area which hosts multiple past-producing mines and several large deposits that are approaching potential development. The Company has a 60% interest in both the Electrum and Treaty Creek properties, and a 100% interest in the Mackie, Eskay North, Orion, Fairweather, Delta and the High North properties, all of which are located in the Golden Triangle area.

#### Cautionary Statements regarding Forward-Looking Information

Certain statements contained in this press release constitute forward-looking information. These statements relate to future events or future performance. The use of any of the words "could", "intend", "expect", "believe", "will", "projected", "estimated" and similar expressions and statements relating to matters that are not historical facts are intended to identify forward-looking information and are based on the Company's current belief or assumptions as to the outcome and timing of such future events. Actual future results may differ materially.

Important factors that could cause actual results to differ materially from the Company's plans or expectations include risks relating to the actual results of current exploration activities at Treaty Creek, fluctuating gold prices, possibility of equipment breakdowns and delays, exploration cost overruns, availability of capital and financing, general economic, market or business conditions, regulatory changes, timeliness of government or regulatory approvals and other risks detailed herein and from time to time in the filings made by the Company with securities regulators. The Company expressly disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise except as otherwise required by applicable securities legislation.

Neither TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.
