

American Battery Metals Corporation Issues Preliminary Geophysics Report Showing Exceptional Conductivity

22.05.2019 | [Accesswire](#)

INCLINE VILLAGE, May 22, 2019 - [American Battery Metals Corp.](#) (OTCQB: ABML) (the "Company"), a premier battery metal exploration and development company based in Nevada, is pleased to announce that its preliminary geophysics report shows exceptional conductivity.

American Battery Metals Corp., Chief Executive Officer, Doug Cole, commented, "This preliminary data shows a monstrous reservoir which is very high in conductivity. As you can see from the picture below, the red and purple shades indicate a pool that could be over 9 cubic miles of liquid or 180 billion barrels of liquid, which further supports our claim of 1 million metric tons of lithium in our immediate basin. Our neighbor to the south has shown huge brine pools as well which helps confirm our findings. Of course, all of these figures will be certified in our upcoming reports."

The complete official GeoPhysics report will be issued in June 2019.

Railroad Valley Project

Forward-Looking Statements

This press release contains "forward-looking statements" within the meaning of the safe harbor provisions of the U.S. Private Securities Litigation Reform Act of 1995. All statements, other than statements of historical fact, including those with respect to the expected project economics for Western Nevada Basin (Railroad Valley), including estimates of life of mine, average production, cash costs, AISC, initial CAPEX, sustaining CAPEX, pre-tax IRR, pre-tax NPV, net cash flows and recovery rates, the impact of self-mining versus contract mining, the timing to obtain necessary permits, the submission of the project for final investment approval and the timing of initial gold production after investment approval and full financing, metallurgy and processing expectations, the mineral resource estimate, expectations regarding the ability to expand the mineral resource through future drilling, ongoing work to be conducted at the Western Nevada Basin (Railroad Valley), and the potential results of such efforts, the potential commissioning of a Pre-Feasibility study and the effects on timing of the project, are "forward-looking statements." Although the Company's management believes that such forward-looking statements are reasonable, it cannot guarantee that such expectations are, or will be, correct. These forward-looking statements involve a number of risks and uncertainties, which could cause the Company's future results to differ materially from those anticipated. Potential risks and uncertainties include, among others, interpretations or reinterpretations of geologic information, unfavorable exploration results, inability to obtain permits required for future exploration, development or production, general economic conditions and conditions affecting the industries in which the Company operates; the uncertainty of regulatory requirements and approvals; fluctuating mineral and commodity prices, final investment approval and the ability to obtain necessary financing on acceptable terms or at all. Additional information regarding the factors that may cause actual results to differ materially from these forward-looking statements is available in the Company's filings with the Securities and Exchange Commission, including the Annual Report on Form 10-K for the year ended September 30, 2018. The

Company assumes no obligation to update any of the information contained or referenced in this press release.
