

Resolution Minerals Ltd: Operations Update

64North Project Alaska

03.09.2020 | [ABN Newswire](#)

Adelaide, Australia - [Resolution Minerals Ltd.](#) (ASX:RML) is pleased to announce that the third phase of drilling for 2020 is well underway at the compelling West Pogo Block adjacent to Northern Star's (ASX:NST) Pogo Gold Mine, Alaska.

Using a helicopter supported diamond core drill rig Hole ID: 20EC05 was completed on 19 August 2020 to a depth of 321m and hole ID: 20RE06 was completed to a depth of 553m on 1 September (figure 2*).

Drilling production rates have improved throughout the year and high-quality structural data has been collected from orientated HQ core. The structural information will be crucial in unlocking the structural controls on mineralisation and will be combined with assay data when it becomes available to enhance drill targeting.

Detailed logging is underway and samples for these two holes will be submitted for assay and reported individually. Due to a surge in gold exploration in North America, we are experiencing longer time frames on return of assays from laboratories and are taking steps to minimise time frames as best possible.

Hole ID: 20AU07 - Aurora Prospect

A track mounted diamond core drilling rig has commenced the third and final diamond core hole for this phase of drilling at current hole ID:20AU07 at the Aurora Prospect. The hole is designed to a depth of 600m and will test a NE trending structural zone, positioned along strike from the Goodpaster Prospect.

The hole is located on the central-northern edge of the Aurora prospect, proximal to an outcropping diorite intrusive and coincident with conductive rocks identified by the ZTEM geophysics survey. The Aurora Prospect is road accessible, which allows for year-round drilling.
