

Cartier Resources Inc. presents the strong hoisting capabilities of the shaft on the Chimo Mine Property

22.09.2020 | [GlobeNewswire](#)

Highlights:

- With simple adjustments, the shaft on the Chimo Mine Property could extract 1.7 million metric tons per year (4,921 mt/day).

- This study is one of four engineering studies carried out in tandem with a preparatory study for a new mineral resource estimate on the Chimo Mine Property to reveal its full value.

VAL-D’OR, Sept. 22, 2020 - [Cartier Resources Inc.](#) (TSX-V: ECR) (“Cartier”) reports the results of an engineering study on the hoisting capacity of the underground mining infrastructure on the Chimo Mine Property. This property, owned 100% by Cartier, is located 45 km east of the Val-d’Or mining camp.

The study reveals that the components of the internal shaft structure could be used to hoist skips with a loading capacity of 20 metrics tonnes each, travelling at a cruising speed of 2,200 feet/minute (40 km/h). This hoisting rate would raise 492 mt/hour of rock to the surface for a total of 4,921 mt/day in 10 hours of hoisting operations per 24-hour day or 1.7 M mt/year.

To date, two internal engineering studies have been completed with positive findings, including the study that is the subject of this press release. Two other internal engineering studies are still underway, as well as an internal preparatory study for a new mineral resource estimate on the Chimo Mine Property.

No PEA, PFS or FS has been completed and disclosure of results from this internal study does not support or imply the technical feasibility and/or economic viability of the project. In addition, while current mineral resource estimates have been completed on separate zones on the property, mineral resources that are not mineral reserves do not have demonstrated economic viability.

Table of current and future features of the shaft infrastructure on the Chimo Mine Property:

Current shaft features

Dimensions of excavated shaft 914 m x 6 m x 2.7 m (represents 15,000 m³ of excavated rock)

3 compartments Each measuring 5'0" x 5'6"

State of internal rock walls In good condition at the time of mine closure

Internal shaft structure 8" x 8" beams of Douglas (BC) fir

State of internal shaft components In good condition at the time of mine closure

Wood submerged under oxygen-free water remains intact* from deterioration for de

Key additional features required

Weight of hoisted rock material 4,921 mt/day in 10 hours of operation per 24-hour period

492 mt/hour

Type of skips 2 skips with a loading capacity of 20 t each, in compartments Nos. 2 and 3

Each skip is 14 m height instead including the cage

Number of hoisted skips per hour 30

Skip cruising speed 2,200 ft/min (40 km/h)

Type of cage 4-deck Mary Ann-type cage with 36-person capacity in compartment No. 1

Height of headframe 57 m

Weight suspended below wheel 56 mt

Type of hoist Drum hoist 5.1 m in diameter with AC drive force of 4880 RMS HP

Type of hoisting cable Single cable 56 mm in diameter or multi-cable system

*: Careful inspection of shaft components will be required, as will the replacement or reinforcement of components that not meet the standards.

About the Chimo Mine Project

- Cartier holds a 100% interest in the property for which a 1% NSR royalty (Net Smelter Return) was granted to IAMGOLD Corporation. No right of first refusal (“buy-back”) was granted.
- The most recent mineral resource estimate for the Chimo Mine Property (FIGURE), detailed below, uses a gold price of US \$1,300 per ounce and a cut-off grade of 2.5 g/t Au:

Gold Corridor Cut-off Grade 2.5 g/t Au	Indicated Resources			Inferred Resources		
	Metric Tons (t)	Gold Grade (g/t)	Troy Ounces (oz)	Metric Tons (t)	Gold Grade (g/t)	Troy Ounces (oz)
Central ⁽¹⁾	3,263,300	4.40	461,280	3,681,600	3.53	417,250
North ⁽²⁾	505,300	5.35	86,850	715,700	4.59	105,710
South ⁽²⁾	249,000	4.63	37,060	480,600	4.84	74,840
Total	4,017,600	4.53	585,190	4,877,900	3.82	597,800

Note 1: Cartier Files NI 43-101 Technical Report on SEDAR for First Mineral Resource Estimate of the Central Gold Corridor on the Chimo Mine Property, G?oPointCom Inc., December 18, 2019.

Note 2: Cartier Files NI 43-101 Technical Report on SEDAR for the Mineral Resource Estimate of the Central, North and South Gold Corridors on the Chimo Mine Property, G?oPointCom Inc., June 17, 2020.

- The property, accessible year-round, is located near several concentrators in the Val d’Or region.
- Fourteen gold zones were mined by three producers between 1964 and 1997 for a production of 376 217 ounces of gold (*MERN DV 85-05 to DV-97-01*).
- The mining infrastructure consists of a network of 7 km of drifts on 19 levels, connected by a shaft with a depth of 914 m. The bridge and surface facilities were dismantled in 2008 but the 25 kV power line and sandpit are still in place.
- Cartier’s drilling programs to date on the Chimo Mine Property amount to 124 drill holes for 58,054 m and 21,867 gold samples collected.

About Cartier

[Cartier Resources Inc.](#), founded in 2006, is based in Val-d’Or, Quebec. The province of Quebec has consistently ranked as one of the best mining jurisdictions in the world, primarily because of its favourable geology, attractive fiscal environment and pro-mining government.

- The Company has a strong cash position with more than \$13.9 million and significant corporate and institutional endorsements, including Agnico Eagle Mines, Meridian Global, and Quebec investment funds.
- Cartier’s strategy is to focus on gold projects with features that offer potential for rapid growth.
- The Company holds a portfolio of exploration projects in the Abitibi Greenstone Belt of Quebec, one of the most prolific mining regions in the world.
- The Company is focused on advancing four key projects through drilling programs. These projects were acquired at reasonable costs in recent years and are drill-ready, with targets along the geometric extensions of known gold deposits.
- Exploration work is currently focused on the Chimo Mine Property to maximize value for investors. The Company is also planning a major drilling program for the Benoist Property. Drilling on the Fenton and Wilson properties will follow the Benoist program.

Qualified Persons

The scientific and technical information of the Company and the Chimo Mine Project, included in this press release, have been prepared and reviewed by Mr. Ga?tan Lavalli?re, P.Geo., Ph.D., Vice President, and Mr. Ronan D?roff, P.Geo, M.Sc., Senior Geologist, Project Manager and Geomatician, both qualified persons as defined by NI 43-101. Mr. Lavalli?re approved the information contained in the press release.

Author of the Engineering Study

The study on the hoisting capacity of the mining infrastructure on the Chimo Mine Property was prepared by Mr. Paul Bonneville, P. ing., Mining Manager, President and Director of PRB Mining Services Inc.
