

Lake Winn Resources Corp. Receives Results from Drone Based Magnetic Survey

03.12.2020 | [The Newswire](#)

[Lake Winn Resources Corp.](#) (“Lake Winn” or the “Company”) (TSXV:LWR) (OTC:EQTXF) is pleased to announce that it has received the final data from the drone based airborne magnetic survey regarding the Cloud project in the Flin Flon gold belt, Manitoba.

The survey was flown by Stratus Aeronautics Inc. based out of Burnaby BC. The survey was flown at 50m line spacings on a north-south grid. The work is designed to assist in the understanding of the geology of the Cloud project.

The magnetic data has immediately shown to map the mafic meta-volcanics that host 320m by 50m Bachnick gold zone and also demonstrates that this geology continues to the west under cover for an additional 1km. This unit, a “greenstone” is thought to host the gold mineralization and this will be the prime target for drill testing which commences next week. The parallel and adjacent IP and Resistivity anomalies will also be tested by drilling. Figure 1 depicts this data. Interpretation of the magnetic data will continue with a focusing on mapping structures.
