

# Kiplin Metals Applying for Geophysical Permits for the Cluff Lake Road Uranium Project in Saskatchewan

26.04.2023 | [The Newswire](#)

VANCOUVER, April 25th, 2023 - [Kiplin Metals Inc.](#) (TSXV:KIP) (the "Company" or "Kiplin") is pleased to announce that its contractor, Grander Exploration, will be applying for the required exploration permits for the Company's summer geophysical program at the Cluff Lake Road (CLR) uranium project in northwestern Saskatchewan.

The CLR property belonging to the Company is encircled by F3 ("F3") Uranium Corp.'s (formerly Fission 3.0) high-profile Paterson Lake North (PLN) project. F3 announced the discovery of the JR high-grade uranium zone in November 2022, with reported intersections (refer to F3 press release dated Feb. 6, 2023) in drill hole PLN22-038, consisting of 11.0 meters averaging 4.20 percent triuranium octoxide, including a 4.5-meter interval averaging 9.8 percent U3O8, indicating the existence of the newest basement-hosted uranium deposit in Athabasca, similar to [Fission Uranium Corp.](#)'s Triple R uranium deposit.

Kiplin's summer program will encompass a minimum of 8 line-kilometres of Induced Polarization (IP) resistivity geophysical surveying, running roughly in an east-west direction. The Saskatchewan Ministry of Environment will be approached for the necessary permits, and the Company will initiate engagement and consultations with its indigenous partners and stakeholders, which will continue throughout the phases of permitting, exploration, and closure. The Company will provide updates on the scheduling of its permitting and work program as and when they are available.

Dr. Peter Born, PGeo, is the designated qualified person as defined by National Instrument 43-101 and is responsible for and has approved the technical information contained in this release.

About Kiplin Metals Inc.

[Kiplin Metals Inc.](#) is a mineral exploration company that aims to generate value for its shareholders by identifying and pursuing highly promising mineral exploration prospects. Our approach is to advance our projects from discovery to production, employing a vertically integrated strategy that enables us to deliver exceptional shareholder value throughout the entire mining process life-cycle.

Cluff Lake Road Uranium Project. Kiplin Metals has the right to earn a one-hundred percent interest in the Cluff Lake Road Uranium Project (the "CLR Project"). The CLR Project covers ~531 ha in the southwestern Athabasca Basin in northern Saskatchewan, where several new discoveries have been made, including the Arrow and Triple R Uranium deposits. The CLR Project is 5 km east of the Cluff Lake Road (Hwy 955), which leads to the historic Cluff Lake Mine, which historically produced approximately 62,000,000 lbs of yellowcake uranium.
