Metallis Outlines Eskay Creek Host Stratigraphy At Kirkham Property

13.09.2023 | CNW

VANCOUVER, Sept. 13, 2023 - Metallis Resources Inc. (TSXV: MTS) (OTCQB: MTLFF) (the "Company" or "Metallis") to announce that following a detailed re-evaluation program conducted by the Company's geological team, Eskay Cree stratigraphy has been identified on the 100%-owned Kirkham Property (the "Property" or "Kirkham") situated in the prol Triangle, northwestern British Columbia. In addition, several high priority exploration targets have been defined. The Pr surrounded by neighboring Eskay Mining, Skeena Resources and Garibaldi Resources, all of which currently have active explorations programs underway.

Dave Dupre P. Geo., (Metallis, VP of Exploration) who was part of the discovery team at Eskay Creek, stated, "We have several targets on our property that bear a solid likeness to the unmistakable signature of the Eskay Creek Mine, one of profitable and highest-grade mines of its time. These include targets where the Willow Ridge Mafic Unit capped the mine "contact mudstone" target unit. This geological feature is incredibly vital to a successful discovery because remnant Est deposits will not have been eroded away where the mafic cap is still present." He went on to add, "The most compelling occur in the north-central part of the Property- north of Terwilligen Creek where rhyolite, alteration zones, gossans (oxionally sulphides), radiometric potassium and geochemical anomalies and the capping Willow Creek Mafic Unit have been material areas have seen very little exploration activity due to historic misinterpretation of the geology and the extensive, but recoglacial coverage."

2023 Property Update:

- Terwilligan Creek has been identified as a high priority area due to mapping of Eskay Creek horizon, geochronolog
 dating and favorable geochemistry; factors that lend themselves to possible Eskay Creek mineralization;
- Other targets offer early stage, cost-effective work programs, and have been highlighted for follow-up. These incl Fewright Creek, Lyons, and Mount Dunn (Click Here to View Map);
 The Company's most developed asset, the Hawilson Copper-Gold Porphyry, continues to be the Company's high
- on the Property; and
- Management looks to continue advancing the Property as it balances fiscal responsibilities.

Eskay Creek Targeting

During the Company's 2022 exploration season, two geochronological (fossil age dating) samples were collected to be understand the stratigraphic setting of the geology surrounding the Hawilson Porphyry. The Geological Survey of Cana confirmed one of the samples as Toarcian age and as such, improved the likelihood of rare Eskay Creek aged rocks of the Kirkham Property, a possibility that was not previously considered. The geological team has since conducted a con re-evaluation of historic datasets including past operators work as well as BC Geological Survey mapping to define seven high-quality targets that offer potential for Eskay Creek stratigraphy and warrant further in-field assessment. Results from Mining's diligent work being carried out across from our property border has demonstrated significant potential for similarly emineralization and the team now recognizes that some of the favorable horizons trace along strike to the Kirkham Very minor reconnaissance exploration has been carried out over these targets in the past.

Terwilligan

The highest priority exploration area for potential Eskay Creek stratigraphy on the Property occurs on the northwestern the Terwilligan headwaters at a location that had been previously mapped by the BCGS. Age dating confirmed several and Pliensbachian aged fossils on, and just off the property, further confirming the location as being prospective. Interp this area using ZTEM data, along with structural measurements, confirm major synclines that could reveal potential Esl host rock at this location.

Also at this prospect, a minor historic work program completed in 1990 returned elevated gold and gold pathfinder elemsamples of rocks with assays up to 1 g/t Au*. This, when combined with geological mapping, provides a compelling rea

further work in the area.

Willow

A band of the Willow Creek Formation has been traced westward from the South Unuk - Harrymel Creek fault onto the Property in an area that has seen very little historic work. Much of the favorable stratigraphy has been covered by glaci retreat has exposed gossans which may be indictive of weathered sulphides. Radio metric potassium anomalies are alin this area.

Mount Dunn

To the west of the Hawilson Monzonite, on a broad bowl-shaped plateau at the southern end of the structurally significal Metallis crews identified fossil specimens that were analysed as Toarcian in age (174-182 Ma). This provides a third are prospective ground for Eskay style mineralization as Metallis field geologists have also identified rhyolites in the area, a stratigraphic marker at the Eskay Creek Deposit.

Fewright Creek

This creek that truncates the south end of the Hawilson Porphyry complex has revealed multiple well mineralized bould past Metallis exploration programs. Identification of 1.4 g/t gold and 4.6% copper in float as well a description of quartz, pyrite alteration (indicative of porphyry mineralization) has been identified up-stream of the Hawilson Monzonite. This lepossibility of other unidentified mineralized intrusions possibly related to the Hawilson Monzonite that have not yet been discovered. Steep slopes and dense bush have hampered exploration on either side of the creek in the past but provide prospective terrain for follow up.

Company Update

Fiore Aliperti, Metallis' President, and CEO commented, "We have thoughtfully assessed the current financial market or and in consideration of the challenging landscape, we've made the strategic decision to postpone a drill program at Kirk year. We have listened to our shareholders and appreciate their concerns relating to the raising of "drilling" capital which levels, would considerably dilute shareholder positions. Instead, we have focused on developing our target pipeline and the advancement of the Kirkham Property. Pending available capital, the company would like to complete work at the Estratigraphy targets, offering the company significant future potential." He went on to add, "This strategic approach ensured have provided in the strategic approach as to work towards unlocated this exceptional asset."

Eskay Creek Mine

Eskay Creek, located 15 km northeast of the Metallis property, was a prolific gold-silver mine that at one point in time, whighest-grade gold mine in the world. Barrick Gold operated the mine for 14 years from 1994 to 2008 with average grade Au and 2,224 g/t silver taken from the Volcanogenic Massive Sulphide (VMS) deposit. Explorationists in the area have extensively for another Eskay style deposit as these VMS systems often form in clusters. Due to local geological setting cover and overburden cover, the host stratigraphy is quite rare across the region and has commonly been eroded away.

Qualified Person

David Dupre, P.Geo, Vice President - Exploration and the Qualified Person, as defined by National Instrument 43-101, reviewed and approved the technical information contained in this release.

Samples collected by Metallis have been submitted to independent certified laboratories together with blanks and stand which yielded acceptable results.

* Historic assays cannot be verified by Metallis, although there is no reason to believe they are inaccurate.

About the Kirkham Property

The wholly owned, 106 sq. km Kirkham Property is located about 65 km north of Stewart, B.C., in the heart of the Gold prolific Eskay (Sulphurets) Camp. The Property is contiguous to <u>Garibaldi Resources Corp.</u>'s E&L Nickel Mountain Project and Eskay Mining Corp. to the east. It is located along a strategic geological boundary - the "Red-line" exposed of western margin of the Eskay Rift system and is prospective for multiple mineral deposit types. The Kirkham Property is km of the past producing Eskay Creek mine while the eastern border is within 12 - 20 km of Seabridge Gold's KSM dep Newcrest Mining's producing Brucejack mine.

About Metallis

Metallis Resources Inc. is a Vancouver-based company focused on the exploration of gold, copper, nickel, and silver a 100%-owned Kirkham Property situated in northwest British Columbia's Golden Triangle. Metallis trades under the symon the TSX Venture Exchange, MTLFF on the OTCQB Exchange, and 0CVM on the Frankfurt Stock Exchange. The Co60,544,312 common shares outstanding.

CAUTION REGARDING FORWARD-LOOKING STATEMENTS

This Press Release may contain statements which constitute 'forward-looking' statements, including statements regard plans, intentions, beliefs and current expectations of the Company, its directors, or its officers with respect to the future activities and operating performance of the Company. The words "may", "would", "could", "will", "intend", "plan", "anticip "believe", "estimate", "expect" and similar expressions, as they relate to the Company, or its management, are intended such forward-looking statements. Investors are cautioned that any such forward-looking statements are not guarantees business activities or performance and involve risks and uncertainties, and that the Company's future business activitie materially from those in the forward-looking statements because of numerous factors. Such risks, uncertainties and factors described in the periodic filings with the Canadian securities' regulatory authorities, including quarterly and annual Man Discussion and Analysis, which may be viewed on SEDAR at www.sedarplus.ca. Should one or more of these risks or uncertainties materialize, or should assumptions underlying the forward-looking statements prove incorrect, actual resumaterially from those described herein as intended, planned, anticipated, believed, estimated, or expected.

Although the Company has attempted to identify important risks, uncertainties and factors which could cause actual resmaterially, there may be others that cause results not to be as intended, planned, anticipated, believed, estimated, or e The Company does not intend, and does not assume any obligation, to update these forward-looking statements.

Neither TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release. The TSX-V Stock Exchange has neither nor disapproved the contents of this news release.
