

Laramide Announces the Appointment of Vice-President for Operations and Strategic Planning, U.S. and Provides Update on Drilling Activity in Australia

18.07.2024 | [CNW](#)

TORONTO, July 18, 2024 - [Laramide Resources Ltd.](#) ("Laramide" or the "Company") (TSX: LAM) (ASX: LAM) (OTCQX: LMRXF), a uranium mine development and exploration company with globally significant assets in the United States and Australia, is pleased to announce the appointment of Mr. Josh Leftwich as Vice-President for Operations and Strategic Planning, U.S.A. Mr. Leftwich's substantive professional expertise will be instrumental in advancing Laramide's U.S. uranium assets through development and into production.

Mr. Josh Leftwich's career includes a role as Director of Radiation Safety and Licensing, reporting directly to the President of Cameco. At Cameco, he was a key senior manager in charge of operational compliance and oversight of three mine operations and seven development projects. He was the key contact for all tribal relations which required development and administrative policy processes, as well, he was the key regulatory contact for all state and federal communications including the Nuclear Regulatory Commission (NRC).

His other relevant uranium mining company experience includes negotiating complex regulatory issues at [Uranium Energy Corp.](#) (UEC); and, as a key component of the initial start-up team at Mestena Uranium (now The Alta Mesa Project owned by Barrick Gold and Boss Energy), he was responsible for all permitting activities including demonstrating and communicating groundwater restoration capabilities and establishing health, safety and environmental/radiation programs from greenfield production.

"We are very pleased to welcome Josh to Laramide Resources and back to the uranium industry where he began his career," said Marc Henderson, CEO and President of Laramide Resources Ltd. "Each of our U.S. projects are development stage and have significant resources and can make a meaningful contribution to future US domestic uranium production, which is now a bipartisan US government objective. This political backdrop should provide a tailwind for our assets and Josh's skills will enhance our progress towards achieving our aggressive development timeline."

Westmoreland Uranium Project Drilling Update

Drilling at the Westmoreland project is proceeding well with the first three of seven planned diamond holes at the Amphitheatre prospect now completed. Initial core sampling of shallow mineralised zones is underway, guided by downhole gamma ray and handheld scintillometer data. The first samples are being prepared for delivery next week to ALS Laboratories.

The first five drillholes at Amphitheatre are targeting immediate extensions of the known mineralisation and to understand structural controls. The last two holes planned for this study at Amphitheatre will be to step out and to test over 300m to the west under alluvial cover to get a sense of the potential scale of this project.

As part of the 2024 resource extension program, a second drill rig will arrive later this month to commence drilling at Huon and Junnagunna to test whether the zones between these two deposits can be linked. The combined program will complete 10,000 to 12,000 meters over 100 drillholes and includes the satellite deposit at Long Pocket with an objective of expanding and updating the Westmoreland Mineral Resource Estimation.

Qualified/Competent Person

The information in this announcement relating to Exploration Results is based on information compiled or reviewed by Mr. Mark Davies, a contractor to the Company. Mr. Davies is a Member of The Australasian Institute of Geoscientists and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the JORC 2012 Edition of the 'Australasian Code for Reporting of Exploration Results'.

Exploration Results, Mineral Resources and Ore Reserves', and is a Qualified Person under the guidelines of the National Instrument 43-101. Mr. Davies consents to the inclusion in this announcement of the matters based on his information in the form and context in which it appears.

About Laramide Resources Ltd.:

Laramide is focused on exploring and developing high-quality uranium assets in Australia and the western United States. The company's portfolio comprises predominantly advanced uranium projects in districts with historical production or superior geological prospectivity. The assets have been carefully chosen for their size, production potential, and the two large projects are considered to be late-stage, low-technical risk projects.

The Westmoreland project in Queensland, Australia, is one of the largest uranium development assets held by a junior company. This project has a PEA that describes an economically robust, open-pit mining project with a mine life of 13 years. Additionally, the adjacent Murphy Project in the Northern Territory of Australia is a greenfield asset that Laramide strategically acquired to control the majority of the mineralized system along the Westmoreland trend.

In the United States, Laramide's assets include the NRC licensed Crownpoint-Churchrock Uranium Project. An NI 43-101 study completed in 2023 has described an in-situ recovery ("ISR") production methodology. The Company also owns the Mesa project in the historic Grants mining district of New Mexico and an underground project, called La Sal, in Lisbon Valley, Utah.

This press release contains forward-looking statements. The actual results could differ materially from a conclusion, forecast or projection in the forward-looking information. Certain material factors or assumptions were applied in drawing a conclusion, making a forecast or projection as reflected in the forward-looking information.
