

Outcrop Silver Extends High-grade At Guadual: 2.35 M Of 3,092 G/t Silver; Three-rig Program Advancing Resource Expansion

03.09.2025 | [CNW](#)

[Outcrop Silver & Gold Corp.](#) (TSXV: OCG) (OTCQX: OCGSF) (DE: MRG) ("Outcrop Silver") reports new high-grade intercepts from the Guadual vein at its 100%-owned Santa Ana primary silver project in Colombia, including 2.35 metres ("m") of 3,092 grams per tonne ("g/t") silver ("Ag") and 4.95 g/t gold ("Au") (3,463 g/t silver equivalent "AgEq") (see Table 1 and Figure 2). With three rigs now turning, drilling is focused on tightening and extending the emerging high-grade core at Guadual North for potential inclusion in the company's next mineral resource ("MRE") update targeted for early 2026, while continuing to grow the broader Santa Ana vein inventory.

Highlights

- DH493 intercepted 2.35 m of 3,093 g/t Ag and 4.95 g/t Au (3,463 g/t AgEq)
- DH495 intercepted 1.30 m of 4,587 g /t Ag and 12.30 g/t Au (5,510 g/t AgEq)
- DH486 intercepted 2.76 m of 880 g/t Ag and 1.67 g/t Au (1,006 g/t AgEq)
- Multiple drill holes intersected high-grade mineralization, confirming strike and depth continuity in the Guadual North vein system, which remains open in all directions (Figure 3)

"The results from Guadual continue to exceed expectations. Recent drilling has returned record silver-equivalent grades and excellent widths, demonstrating a robust and strongly mineralized system. These results demonstrate potential for significant high-grade silver resource additions to our upcoming MRE," commented Guillermo Hernandez, Vice President of Exploration. "We are especially excited to see the mineralization remain open along strike and at depth. The team is delivering outstanding results, and looking forward to continuing the definition and expansion of this exciting target."

Table 1. Drill hole assay results reported in this release.

Guadual is a prominent vein target in the central part of the Santa Ana project. Structurally aligned NNE-NE

and dipping sub-vertically, the vein hosts quartz-sulfide mineralization associated with argentite, pyrite, and galena, typical of Santa Ana's high-grade mineral systems. Surface trenching and prior drilling confirmed a footprint of more than 400 metres, with the Guadual North segment now emerging as a high-grade core area for near-term mineral resource inclusion.

The delineation drilling campaign at Guadual will continue with both step-out and infill drilling designed to define the full extent of the mineralized shoots identified to date, particularly in the Guadual North vein. The current focus is on tightening drill spacing within high-grade zones to meet the requirements for resource estimation, while also extending drilling at depth and along strike to test the continuity of the mineralization. Concurrently, geological and structural modeling is being advanced to refine the interpretation of vein geometries, with grade shell modeling and domain definition already underway. These efforts will feed directly into our internal mineral resource estimate calculations currently underway. Additionally, exploration drilling will assess the potential structural connections between the Guadual, Jimenez, and Aguilar veins, which together form a mineralized corridor exceeding 2 km in length with multiple confirmed high-grade shoots. The outcomes of these steps are expected to provide a robust foundation for a significant expansion of the mineral resources at Santa Ana.

Table 2. Surface chip and grab sample results in the Guadual vein target from the regional exploration program, including those previously reported and referred to in Figure 1 (see News Releases dated July 5, 2022 , and September 11, 2024). * By their nature, grab and chip samples are selective, and the assay results may not necessarily represent true underlying mineralization. Coordinates are UTM system, zone 18N and WGS84 projection.

Qualified Person

The technical information contained in this news release has been reviewed and approved by Mr. Guillermo

Hernandez, CPG-AIPG, Vice-President Exploration at Outcrop Silver. Mr. Hernandez is a Qualified Person for the Company as defined by National Instrument 43-101.

¹ Silver Equivalent

Metal prices used for equivalent calculations were US\$1,800/oz for gold, and US\$25/oz for silver. Metallurgical recoveries based on Outcrop Silver's metallurgical test work are 97% for gold and 93% for silver (see news release dated August 23, 2023). The equivalency formula is as follows:

QA/QC

Outcrop Silver applied its standard protocols for sampling and assay for exploration activities. Core diameter is a mix of HTW and NTW depending on the depth of the drill hole. Diamond drill core boxes were photographed, sawed, sampled and tagged. Samples were bagged, tagged and packaged for shipment by truck from Santa Ana's core logging facilities in Falan, Colombia to the Actlabs certified sample preparation facility in Medellin, Colombia. ActLabs is an accredited laboratory independent of the Company. HQ-NTW core is sawn with one-half shipped. Samples delivered to Actlabs were AA assayed on Au, Ag, Pb, and Zn at Medellin using 1A2Au, 1A3Au, Multi-elements AR (Ag Cu Pb Zn), and Code 8 methods. Then, samples were sent to Actlabs Canada in Ancaster, Ontario, for ICP-multi-elemental analysis with code 1E3. In line with QA/QC best practices, blanks, duplicates, and certified reference materials are inserted at approximately three control samples every twenty samples into the sample stream, monitoring laboratory performance. A comparison of control samples and their standard deviations indicates acceptable accuracy of the assays and no detectable contamination. No material QA/QC issues have been identified with respect to sample collection, security and assaying. The samples are analyzed for gold and silver using a standard fire assay on a 30-gram sample with a gravimetric finish for over-limits. Multi-element geochemistry was determined by ICP-MS using either aqua regia or four acid digestions. Crush rejects, pulps, and the remaining core are stored in a secured facility at Santa Ana for future assay verification.

About Santa Ana

The 100% owned Santa Ana project spans over 28,000 hectares within the Mariquita District, encompassing both titles and applications, and is recognized as the largest and highest-grade primary silver district in Colombia, with mining records dating back to 1585.

Santa Ana's maiden resource estimate, detailed in the NI 43-101 Technical Report titled "Santa Ana Property Mineral Resource Estimate," dated June 8, 2023, prepared by AMC Mining Consultants, indicates an estimated indicated resource of 1,226 thousand tonnes containing 24.2 million ounces silver equivalent¹ at a grade of 614 grams per tonne and an inferred resource of 966 thousand tonnes containing 13.5 million ounces at a grade of 435 grams per tonne of silver equivalent¹. The identified resources span seven major vein systems that include multiple parallel veins and mineralized shoots: Santa Ana (San Antonio, Roberto Tovar, San Juan shoots); La Porfia (La Ivana); El Dorado (El Dorado, La Abeja shoots); Paraiso (Megapozo); Las Maras; Los Naranjos, and La Isabela.

The drilling campaign aims to extend known mineralization and test new high-potential areas along the permitted section of the project's extensive 30 kilometres of mineralized trend. The current exploration strategy seeks to establish a clear pathway for substantially expanding the mineral resource. These efforts underscore the scalability of Santa Ana and its potential for substantial resource growth, positioning the project to develop into a high-grade, economically viable, and environmentally responsible silver mine.

About Outcrop Silver

Outcrop Silver is a leading explorer and developer focused on advancing its flagship Santa Ana high-grade silver project in Colombia. Leveraging a disciplined and seasoned team of professionals with decades of experience in the region. Outcrop Silver is dedicated to expanding current mineral resources through strategic exploration initiatives.

At the core of our operations is a commitment to responsible mining practices and community engagement,
