

# Aventis Energy Bolsters Targets Along Uranium Trends at the Corvo Uranium Project with KorrAI Technologies

10.11.2025 | [GlobeNewswire](#)

VANCOUVER, Nov. 10, 2025 - [Aventis Energy Inc.](#) ("Aventis" or the "Company") (CSE: AVE | FRA: C000 | OTC: VBAMF) is pleased to announce that, in partnership with KorrAI Technologies Inc. ("KorrAI"), it has identified hotspots of biogeochemically stressed vegetation that may be linked to the presence of radiogenic compounds and radon related to uranium mineralization at the Corvo Project ("Corvo" or the "Project"). The Project is comprised of 12,265 hectares of uranium exploration real estate located along the eastern margin of Saskatchewan's Athabasca Basin.

KorrAI completed a satellite-based remote sensing study powered by geology-driven artificial intelligence (the "Program"). Hyperspectral data were analyzed and processed to identify potential areas of biogeochemically stressed vegetation potentially caused by environmental stressors such as radiogenic compounds.

Michael Mulberry, Chief Executive Officer of the Company, commented, *"With the findings provided by KorrAI, we are very excited to be driving further advancement at Corvo. Through a combination of artificial intelligence, hyperspectral satellite data, and high-resolution optical and infrared datasets, we have identified several corridors of interest that have allowed for more detailed modeling of the Project. We are pleased to be working in partnership with KorrAI, a leading technology firm in the exploration industry, and we look forward to uncovering new insights at Corvo as we move forward."*

Highlights - The analysis defined three principal zones of elevated biogeochemical stress:

- *Northeast-southwest trend in the central segment of the area of interest:*

If accurately positioned above a faulted zone, this zone of elevated biogeochemical stress could be indicative of faults acting as conduits for radiogenic gases, e.g., radon, and therefore could be indicative of concentrated uraniferous lithology at a depth intersected by the faults.

- *Eastern trend:*

A linear grouping appears to trend along pelitic and psammo-pelitic gneiss in the eastern section of the claim with a strong signature grouped close to the felsic gneiss identified by surface mapping.

- *Overlying the intrusive body at the west of the Project:*

A significant grouping of incidences of elevated biogeochemical stresses appears to generally correlate with a mapped granitic pluton (Wg) along the western extent of the Project. While granitic plutons can often exhibit elevated radiometric signatures, this is unlikely to result in an explorable uranium target given the unconformity-type play pursued in Saskatchewan's Athabasca Basin.

The work forms part of KorrAI's ongoing effort to integrate artificial intelligence and hyperspectral satellite data into early and mid-stage exploration. Using high-resolution optical and infrared datasets, the Company modeled vegetation stress patterns associated with uranium-related radiogenic decay. These biogeochemical signatures, when overlain on geological maps, highlighted several areas of interest that correspond to known structural trends on the Project.

Figure 1. Indicated incidences of elevated biogeochemical stress - Class 1 interpretation.

According to KorrAI, these anomalies may correspond closely with favourable basement lithologies and faulted graphitic horizons previously identified through airborne geophysics and surface mapping. The results reinforce the Project area's potential to host shallow-cover, basement-hosted uranium mineralization analogous to other Athabasca region deposits.

Figure 2. Indicated incidences of elevated biogeochemical stress - Class 2 interpretation.

#### Marketing Extension

The Company is also pleased to announce, further to its news release on September 18, 2025, that it has increased the advertising budget under its engagement of marketing services with RMK Marketing Inc. ("RMK") (address: 41 Lana Terrace, Mississauga, Ont., Canada, L5A 3B2; e-mail: Roberto@rmkmarketing.ca). RMK was retained by the Company on September 18, 2025 to provide marketing services for a term of four (4) months, commencing September 22, 2025, with an option to increase the advertising budget up to \$400,000 CDN during the term (the "Agreement"). Pursuant to the terms of the Agreement, the Company has decided to execute its option to increase the advertising budget for the existing term to \$400,000 CDN by compensating RMK an additional \$150,000 CDN.

RMK is an independent company which will, as appropriate, co-ordinate marketing actions, maintain and optimize AdWords campaigns, adapt AdWords bidding strategies, optimize AdWords ads, provide project management and consulting for an online marketing campaign and create and optimize landing pages (the "Services"). The promotional activity will occur by Google. The Company will not issue any securities to RMK as compensation for the Services. As of the date hereof, to the Company's knowledge, RMK (including its directors and officers) does not own any securities of the Company and has an arm's-length relationship with the Company.

#### Qualified Person Statement

The scientific and technical information contained in this news release has been reviewed, verified, and approved by Sean Hillacre, P.Geo., President and VP Exploration of [Standard Uranium Ltd.](#) and a "qualified person" as defined in NI 43-101 - *Standards of Disclosure for Mineral Projects*. Mr. Hillacre is independent of KorrAI and the reader is cautioned that this method may not represent true underlying mineralization.

Historical data disclosed in this news release relating to sampling results from previous operators are historical in nature. Neither the Company nor a qualified person has yet verified this data and therefore investors should not place undue reliance on such data. The Company's future exploration work may include verification of the data. The Company considers historical results to be relevant as an exploration guide and to assess the mineralization as well as economic potential of exploration projects. Any historical grab samples disclosed are selected samples and may not represent true underlying mineralization.

About Aventis Energy Inc.

Aventis Energy Inc. (CSE: AVE | FRA: C000 | OTC: VBAMF) is a mineral exploration company dedicated to the development of strategic projects comprised of battery, base and precious metals in stable jurisdictions. The Company is working to advance its Corvo Uranium & Sting Copper Project.

The Corvo Uranium property has historical drill holes intersected multiple intervals of uranium mineralization, notably along a strike length of 800 metres between historical drill holes TL-79-3 (0.116% U<sub>3</sub>O<sub>8</sub> over 1.05 m) and TL-79-5 (0.065% U<sub>3</sub>O<sub>8</sub> over 0.15 m)<sup>2</sup>. High-grade\* Uranium at Surface with the Manhattan showing (0.72 to 8.10% U<sub>3</sub>O<sub>8</sub>)<sup>1</sup> and SMDI showing 2052 (0.137% U<sub>3</sub>O<sub>8</sub> and 2,300 ppm Th).

The Sting Copper Project covers approximately 12,700 hectares and recently had results of 54.8m at 0.32% Cu starting at a depth of 27.0m, with higher-grade intervals including six samples (0.5m length) ranging from 0.96% to 5.43% Cu. High grade samples of 0.5m at 2.85% Cu and 0.5m at 1.92% Cu with an additional broader interval of 31.1m at 0.27% Cu.

Disclaimer for Forward-Looking Information

*This news release includes certain "Forward-Looking Statements" within the meaning of the United States Private Securities Litigation Reform Act of 1995 and "forward-looking information" under applicable Canadian securities laws. When used in this news release, the words "anticipate", "believe", "estimate", "expect", "target", "plan", "forecast", "may", "would", "could", "schedule" and similar words or expressions, identify forward-looking statements or information.*

*Forward-looking statements and forward-looking information relating to any future mineral production, liquidity, enhanced value and capital markets profile of Aventis, future growth potential for Aventis and its business, and future exploration plans are based on management's reasonable assumptions, estimates, expectations, analyses and opinions, which are based on management's experience and perception of trends, current conditions and expected developments, and other factors that management believes are relevant and reasonable in the circumstances, but which may prove to be incorrect. Assumptions have been made regarding, among other things, the price of uranium, copper, gold and other metals; costs of exploration and development; the estimated costs of development of exploration projects; Aventis' ability to operate in a safe and effective manner and its ability to obtain financing on reasonable terms.*

*This news release contains "forward-looking information" within the meaning of the Canadian securities laws. Statements, other than statements of historical fact, may constitute forward looking information and include, without limitation, statements with respect to the Project and its mineralization potential; the Company's objectives, goals, or future plans with respect to the Project; statements with respect to the Program; expected benefits of the Program; the Company's anticipated exploration program at the Project and the provision of the Services by RMK under the Agreement;. With respect to the forward-looking information contained in this news release, the Company has made numerous assumptions regarding, among other things, the geological, metallurgical, engineering, financial and economic advice that the Company has received is reliable and are based upon practices and methodologies which are consistent with industry standards. While the Company considers these assumptions to be reasonable, these assumptions are inherently subject to significant uncertainties and contingencies. Additionally, there are known and unknown risk factors which could cause the Company's actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by the forward-looking information contained herein. Known risk factors include, among others: fluctuations in commodity prices and currency exchange rates; uncertainties relating to interpretation of well results and the geology, continuity*

*and grade of uranium, copper, gold and other metal deposits; uncertainty of estimates of capital and operating costs, recovery rates, production estimates and estimated economic return; the need for cooperation of government agencies in the exploration and development of properties and the issuance of required permits; the need to obtain additional financing to develop properties and uncertainty as to the availability and terms of future financing; the possibility of delay in exploration or development programs or in construction projects and uncertainty of meeting anticipated program milestones; uncertainty as to timely availability of permits and other governmental approvals; increased costs and restrictions on operations due to compliance with environmental and other requirements; increased costs affecting the metals industry and increased competition in the metals industry for properties, qualified personnel, and management. All forward-looking information herein is qualified in its entirety by this cautionary statement, and the Company disclaims any obligation to revise or update any such forward-looking information or to publicly announce the result of any revisions to any of the forward-looking information contained herein to reflect future results, events or developments, except as required by law.*
