

GoldHaven Resources Corp. Completes Eight Diamond Drill Holes at Copeçal Gold Project in Brazil

02.12.2025 | [GlobeNewswire](#)

Ninth Hole Underway To Follow Up Sulphide Intersection in Hole 4 East Target

[GoldHaven Resources Corp.](#) (CSE: GOH | OTCQB: GHVNF | Frankfurt: 4QS) ("GoldHaven" or the "Company") is pleased to announce the successful completion of eight diamond drill holes at its 100%-owned Copeçal Gold Project in Mato Grosso State, Brazil.

The maiden diamond drilling program, focused on high priority gold targets outlined by soil and auger geochemistry supported by geophysical surveys, has now been expanded to include a ninth drill hole.

With encouraging progress to date, the addition of a ninth drill hole to the program-now advancing at the eastern target-will directly follow up on the promising disseminated pyrite-chalcopyrite sulphide interval intersected in Hole COPE-PDH-004. This targeted step-out is designed to further assess the potential scale and continuity of this emerging mineralized zone.

Figure 1: Location of reconnaissance drill holes completed at the Copeçal Project to date (COPE-PDH001 - COP-PDH008) testing both the East and West Anomalies.

Figure 2: Images of core from hole COP-004 showing Phyllic Alteration (Quartz-Sericite-Pyrite-Calcite) of sheared biotite granitoid and associated fine disseminated pyrite - chalcopyrite

Program Highlights

- Sulphide mineralization (disseminated fine grained, pyrite and chalcopyrite) was intersected in hole COPE-PDH-004 from 79m to the end of the hole at 100.25m associated with weak to moderate phyllic alteration (quartz - muscovite-sericite-calcite) within a sheared medium grained biotite - granitoid.
- As previously messaged, the intersection of sulphides in hole COPE-PDH-004 provided the first real evidence from drilling completed to date of potential mineralization as a probable source for the anomalous surface gold in soil and auger sample anomalism at the East Target.
- Hole COPE-PDH-009 (in progress) is a follow-up hole aimed at testing the depth extension of the mineralization intersected in hole COPE-PDH-004.
- Assay results from holes COPE-PDH-004 and the saprolite portions of holes COPE-PDH-001 and 002 are awaited.
- Eight diamond drill holes completed to date totaling (889.55m) comprising 441.7 metres (4 holes) at the East Target and 447.85 metres (4 holes) at the West Target.
- The four holes (COPE-PDH-005, 006, 007 and 008) drilled at the West Target intersected saprolite to a vertical depth of approximately 50m. The bedrock beneath the saprolite comprises sheared granodiorite gneiss and biotite schist with sporadic quartz veining and zone richer in sericite - muscovite and deformed pegmatitic phases. Geological logging and sampling of these holes is in progress. The enhanced thickness of the Saprolite in this area was not expected.
- The ninth hole COPE PDH009 (figure 3) is planned to drill 200m down-hole depth at the East Anomaly.

Table 1: Tabulation of drilling statistics to date at Copeçal.

Figure 3: Location and planning section through hole COPE-PDH-009 (drilling in progress) following up sulphide mineralization (pyrite - chalcopyrite) associated with phyllic alteration (quartz - sericite - pyrite - calcite) intersected within sheared biotite granitoid in hole COPE-PDH-004.

Once the ninth hole is completed later this week, the initial reconnaissance phase will conclude. Thereafter, all drill cores will be geologically logged, sampled, and submitted for assay, with results to be released upon receipt.

GoldHaven looks forward to providing a detailed update on geological logging, sampling, and assay results in due course, as the Company advances toward its discovery objectives at Copeçal.

Rob Birmingham, President of GoldHaven Resources, commented:

"We are encouraged by the progress made during this initial drill campaign at Copeçal," stated Rob Birmingham, President & CEO of GoldHaven Resources. "The sulphide interval intersected in Hole COPE-PDH-004 is the strongest subsurface evidence we've seen to date supporting the robust gold anomalism outlined at surface. Our decision to add a ninth follow-up hole is a direct response to this promising development and underscores our disciplined approach to advancing high-priority targets. With the reconnaissance phase wrapping up this week and all cores soon to be logged, sampled, and submitted for assay, we look forward to reporting results as we continue to build momentum toward establishing the scale and discovery potential of the Copeçal system.

About the Copeçal Gold Project: A Brief History

The Copeçal Gold Project is strategically situated within the Alta Floresta Gold Province, a historically productive region that has yielded substantial gold discoveries since the late 1970s. GoldHaven's tenements cover a total of 3,681 hectares in a geologically favourable setting within the Jurueña Gold Province of Brazil.

Figure 4: Location of the Copeçal Gold Project within Alta Floresta gold province, with competitor locations.

The Jurueña Gold Province, also known as the Jurueña Magmatic Arc, is an orogenic belt highly prospective for mesothermal shear-related and intrusion-related gold deposits, such as G-Mining's Tocantinzinho deposit. Additionally, the region hosts recently identified porphyry-style deposits (e.g., Serabi, Jaca) and epithermal-style deposits (e.g., X1, Aura). The presence of multiple deposit styles, along with the confirmation of large-scale gold deposits in the Jurueña Province of Brazil, underscores the significant potential of the Copeçal Gold Project.

Recent exploration programs, including geochemical soil sampling, drone-mounted magnetometry surveys, and historical drilling data, indicate the presence of multiple gold-bearing structures. Notably, AngloGold Ashanti previously conducted systematic exploration on the property from 2010 to 2016, including auger and air-core drilling, geophysical surveys, and rock geochemistry, identifying multiple zones of anomalous gold mineralization.

The Copeçal Gold Project benefits from extensive historical work, with AngloGold Ashanti's exploration confirming gold and arsenic anomalies, indicative of significant mineralization potential. Soil sampling grids and follow-up auger drilling in key areas revealed consistent gold values over wide zones, further supporting the presence of a substantial mineralized system.

About GoldHaven Resources Corp.

GoldHaven Resources Corp. is a Canadian junior exploration Company focused on acquiring and exploring highly prospective land packages in North and South America. The Company's projects include (i) the flagship Magno Project, a district-scale polymetallic property adjacent to the historic Cassiar mining district in British Columbia; (ii) the Three Guardsman Project, which exhibits significant potential for copper and gold-silver mineralization; (iii) the Copeçal Gold Project, a drill-ready gold project located in Mato Grosso, Brazil with a 6km strike of anomalous gold in soil samples; and (iv) three critical mineral projects with extensive tenement packages totalling 123,900 hectares: Bahia South, Bahia North and Igautu projects located in Brazil.

Forward-Looking Statements

This news release contains "forward-looking information" within the meaning of applicable Canadian securities legislation. Often, but not always, forward-looking information and information can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "estimates", "intends", "anticipates" or "does not anticipate", or "believes", or variations of such words and phrases or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Actual future results may differ materially. In particular, this news release contains forward-looking information relating to the Company and the Property. The forward-looking information reflects management's current expectations based on information currently available and are subject to a number of risks and uncertainties that may cause outcomes to differ materially from those discussed in the forward-looking information. Such risk factors may include, among others, but are not limited to: general economic conditions in Canada and globally; industry conditions, including governmental regulation and environmental regulation; the availability of capital on acceptable terms; the need to obtain required approvals from regulatory authorities; stock market volatility; competition for, among other things, skilled personnel and supplies; incorrect assessments of the value of acquisitions; geological, technical, processing and transportation problems; changes in tax laws and incentive programs; failure to realize the anticipated benefits of acquisitions and dispositions; and the other factors. Although the Company believes that the assumptions and factors used in preparing the forward-looking information are reasonable, undue reliance should not be placed on such information and no assurance can be given that such events will occur in the disclosed time frames or at all. Factors that could cause actual results or events to differ materially from current expectations include: (i) adverse market conditions; and (ii) other factors beyond the control of the Company. New risk factors emerge from time to time, and it is impossible for the Company's management to predict all risk factors, nor can the Company assess the impact of all factors on Company's business or the extent to which any factor, or combination of factors, may cause actual results to differ from those contained in any forward-looking information. The forward-looking information included in this news release are made as of the date of this news release and the Company expressly disclaims any intention or obligation to update or revise any forward-looking information whether as a result of new information, future events or otherwise, except as required by applicable law. Additional information identifying risks and uncertainties that could affect financial results is contained in the Company's filings with Canadian securities regulators, which

are available on the Company's profile at www.sedarplus.ca.
